

108 AIRTRACK SAFETY GOGGLE

DUAL LENS WITH ANTI FOG

The Airtrack is a dual lens safety goggle. This provides for maximum protection. In the unlikely event of a failure, you have a secondary backup.

With a dual lens design, there is an air varrier between the two lens. This design helps reduce fogging on the lens.

In addition, all four lens surfaces have been anti-fog coated with our specially formulated A+ grade of anti-fog solution, ensuring you have the ultimate in anti-fog protection.

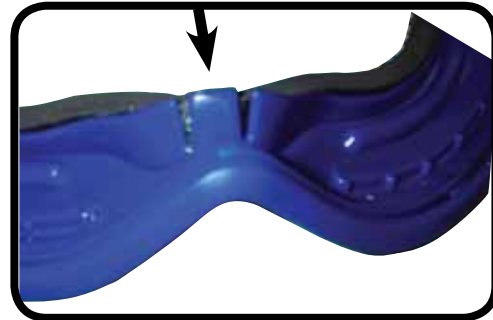

SWIVEL / ROTATABLE STRAP

The adjustable length strap can swivel at a specially designed hinge. This allows you to wear the Airtrack goggle if you are wearing a safety helmet or under specialised head protection equipment or as a medium impact safety goggle. Adjust the swivel to maximise your comfort.

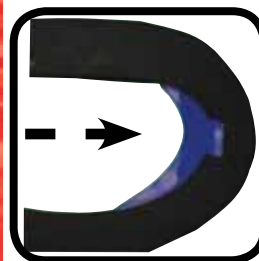

SEGMENTED NOSE PIECE

The nose piece has been specially constructed with segments that allow the Airtrack to contour around your nose, and be worn comfortably throughout your working day.

FULL FOAM CELL PROTECTION

The Airtrack comes with a full foam cell provides you with maximum protection from stray particles that may penetrate into your eyes.

DESIGNED TO BE WORN OVER SPECTACLES

The foam padding has grooves in the inner foam section that allows you to wear the Air-track goggle over your spectacles comfortably.

FEATURES

- Non vented
- Splash resistance
- Medium Impact Safety Goggle
- Distortion Free Dual Lens
- UV Protection
